Final Go Live Date Announced for PeopleSoft

April 17, 2013

After an extensive assessment of the PeopleSoft project and District business requirements, the PCCD PeopleSoft Upgrade Project Steering Committee determined the launch date will be **May 20, 2013**. All PCCD institutions will Go Live on this date.

As of March 2013, the project is in data validation and testing phases, both of which are critical to the success of the implementation. The PeopleSoft Upgrade Project Steering Committee’s assessment revealed that in order for the outcomes of these processes to provide the greatest benefit for the implementation and the least impact on business and educational services this May date was the most viable.

As the project moves forward, we will continue to communicate with our users via email, social media, portal announcements, open forums, and focus groups. The District IT PeopleSoft Project page, [http://web.peralta.edu/it/psupgrade](http://web.peralta.edu/it/psupgrade), will keep you up to date as well. Please visit the above site for information about the temporary service outage that begins at 6pm on Wednesday, May 15th through 3am Monday, May 20th.

We appreciate the patience and support provided by the Peralta CCD community as we work to update our computer information system. We are looking at ways to provide you with more opportunities to see demonstrations and learn more about PeopleSoft in the coming months. Thank you to all who have taken part in this project.

Respectfully,

Calvin Madlock
Associate Vice Chancellor - District Information Technology
